

ABSTRACT

Supply chain excellence in a company plays a real impact on the business strategies and objectives of a company. Supply chain management can also be identified as an important mission who has a high impact on the company which goes to the roots of a company's competitiveness, where the decisions and the missions aligned with this may affect the company's sustainability both in the long haul and short haul. In order to maintain a good control over a company's supply chain, good governance practices is a must and this research is an attempt to find a theory for supply chain good governance by identifying the barriers and facilitators for good governance of a supply chain and this further emphasizes on the impacts of both facilitators and barriers which may affect good governance approaches.

For a supply chain to outperform its competitors, it should have a solid governed structure where it can be integrated with firms to attain strategic and operational efficiencies. Driving factors for good governance of a supply chain has called strategic attention for the need to organize a well governed supply chain structure and a good governance to respond to all the activities efficiently and effectively according to the global dynamics.

After the comprehensive Literature Review, the dependent and the independent variables for this research has been identified out of which a questionnaire was designed and the data collected through the questionnaire has been analyzed using several data analytical methods using the SPSS statistical software in gaining the outcomes. Then, recommendations, research findings and conclusions are provided supporting the research objectives and the research problem.

Keywords: Supply Chain, Good Governance, Barriers, Facilitators, Integration, SPSS Statistical Software and Significance.
